1082

CC This sequence represents cDNA encoding a novel human protein, STRAP-1 CC (serpentine transmembrane antigen of the prostate). STRAP-1 is the CC prototype member of the STRAP family of proteins (AAY58194-Y58197) which CC exhibit a high degree of structural conservation, but which show no CC significant structural homology to known human proteins. The STRAP-1 gene CC lila membrane protein and is expressed predominantly in prostate cells in CC cormal human tissues. Structurally, STRAP-1 is a 339 amino acid protein CC caracterised by six transmembrane domains and intracellular N- and C-CC termini, suggesting that it folds in a "serpentine" manner into three CC extracellular and two intracellular loops. STRAP-1 mRNA and protein CC expression is maintained at high levels and throughout all stages of CC prostate cancer. STRAP-1 mRNA and/or protein is also overexpressed in CC certain other cancers, including bladder, colon, pancreatic and ovarian cancer. The function of the STRAP proteins is not known. They may be ion CC channels (from the presence of six transmembrane domains, a feature which is shared by certain ion channels) or gap-junction proteins (from the context transmembrane domains, a feature which can shared by certain in staining). STRAP-1 and STRAP-2 are cell-surface context.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            humoral immune responses against STRAP-expressing cells. STRAP proteins may be used to identify specific-binding agents, to produce anticancer vaccines and to generate specific antibodies. The antibodies may be used for detection, prognosis, and monitoring of cancers (or susceptibility to cancer), as therapeutic inhibitors or to target therapeutic agents to their site of action. STRAP nucleic acids may be used for recombinant protein production, as diagnostic and prognostic reagents, for identifying STRAP-expressing cells for screening inhibitors of STRAP expression. Since high levels of STRAP proteins are exposed on the cell surface, they are easily targetted by systemically administered agents, and because they are expressed mainly on prostatic epithelial cells, agents targetted to them should have minimal side effects on other tissues
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1017;

                                                                                                                                                                                                             Afar DEH,
Faris M,
         The present sequence is human six transmembrane epithelial antigen of the prostate (STEAP)-1 clone 10 CDNA. STEAP is a member of cell surface serpentine transmembrane antigens. STEAP is a member of cell surface 7922.3 and is used in gene therapy. Inhibiting the development or progression of a cancer (eg. prostate, colon, bladder, lung, ovarian and pancreatic) expressing STEAP or inhibiting growth or killing cells expressing STEAP in a patient, comprises administering a vaccine

Note: The present sequence is also shown in sequence listing of the specification, but it lacks nulceotides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 1193 BP; 382 A; 219 C; 233

                                                                                                                                                                                                                                                                                        The invention describes a composition comprising a substance that modulates the status of a protein (I) of 340 or 283 amino acids, or of any of the 15 sequences of 259 amino acids, given in the specification, or a molecule that is modulated by the protein, where the status of the cell that expresses the protein is modulated. The compositions, proteins, polynucleotides and methods are useful for treating and detecting cancer. The STEAP-1-related proteins are useful for generating cancer vaccines. The polynucleotides are useful as tools for delineating, with greater precision, cytogenetic abnormalities in the chromosomal region that encodes STEAP-1 that may contribute to the malignant phenotype. This sequence encodes a variant of human six transmembrane epithelial antigen of the prostate or STEAP-1
                                                                                                                                                                                                                                         Sequence 1193
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New composition comprising a substance that modulates the status of STEAP-1-related protein, useful for treating and detecting cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          06-SEP-2001; 2001US-0317840P.

                                                                                                                                                                       The invention relates to cell surface serpentine transmembrane antigens predominantly expressed in the prostate termed as six transmembrane epithelial antigen of prostate (STEAP-2) and their corresponding nucleic acid sequences. STEAP-2 DNA is useful for diagnosing or treating prostate cancer. It can be used as a primer or probe for the amplification and/or detection of STEAP genes and as a tool for modulating or inhibiting the expression of the STEAP genes. STEAP-2 DNA is also useful in cancer vaccines for the generation of therapeutic or prophylactic immunity against prostate cancer. STEAP antibodies are useful in antibody therapy. The present sequence is the human STEAP-1 cDNA. Human STEAP-1 gene maps within chromosome 7p22 (7p2.3).
                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                               Afar

(I) and (II) have cytostatic activity, and can be used in vaccine production and gene therapy. (I), (II), antibodies to (II), fusion proteins comprising (II), and isolated T cells prepared using (I) or (II) are used treat cancer in a patient. (I) and the antibodies are also used in the detection of cancer in a patient. The cancer that is diagnosed or treated is particularly prostate cancer. (I) and (II) can be used in vaccines. The antibodies or (I) can be used for monitoring the progression of cancer in a patient. (I) and (II) can also be used to improve diagnostic and therapeutic methods for prostate cancer. They can indicate the level of metastasis as well as the prostate volume. AAH93357 to AAH93944 and AAMO1115 to AAMO1318 represent polynucleotide and amino acid sequences used in the exemplification of the prosent invaries.

The invention relates to isolated prostate-specific polynucleotides, polypeptides, fusion proteins of the polypeptides, antibodies raised against the polypeptides (or antigenic epitopes derived from them) and antigen-presenting cells expressing the polypeptides. The antibodies are useful for detecting the presence of cancer, especially prostate cancer. The polypeptides, polynucleotides and the antigen-presenting cells are useful for stimulating and/or expanding T cells specific for a tumour protein, and for inhibiting the development of cancer especially prostate cancer. Compositions comprising the polynucleotide and/or polypeptide are useful for stimulating an immune response, and for treating cancer. The oligonucleotide is useful for detecting cancer. The present sequence is a prostate specific polynucleotide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Xu J, Dillon
